

Probably our greatest strength is our technical ability. We offer a wide range of moulding, post moulding and other operations. Our machines are well maintained and highly capable and our staff are very experienced in handling complex moulding projects.

We have partner toolmaking companies in both Czech and Asia that work with us on providing tooling of the highest quality at a reasonable cost level.

Our Electric Moulding Machines (Fanuc), our RHCM, our Gas Injection and our spray painting technologies mean we can offer a practically unrivalled service in supplying quality plastic parts. We have experience in producing parts from highly cosmetic large parts to small, intricate, dimensionally critical small parts.
