

We have one of the widest ranges of technologies of any injection moulding / finish company. Included in our range are **Gas Injection Moulding, RHCM Moulding, Electric Moulding Machinery, Automated Painting, Laser Printing, Tampo Printing, Assembly.**

We can project manage your product from start to finish. If you give us a part design in any format, we can progress through prototyping and tooling to mass production.

However – apart from the above we are always looking to look at other complementary technologies. So if you have a requirement, please discuss it with us. We pride ourselves on our innovation and our willingness to say **'yes'**.
