

Our Laser printing customers have included companies such as Foxconn, Primax and Sony in the past. This technology which can provide marking on plastic parts of excellent consistency and accuracy is in much demand. As the process is inherently very fast and repeatable we can handle a high volume of parts per day.

We back this up with our software abilities to provide a full traceability service for all parts printed.

Laser printing can have many uses and advantages over other types of printing.

- **It is more permanent.**
- **It is more accurate.**
- **It can be used for many different applications – for example for keyboard printing, permanent serial number printing and in conjunction with painting it can be used to give very accurate colour separation and two colour effect..**
- **It is a cleaner technology with little waste and less environmental impact than tampo or screen printing.**
