

We are equipped with 6 axis ABB painting robots that can ensure consistency and quality. We also have manual paint booths to support our automated process.

Paint is supplied by a Graco paint mixing unit – this ensures that a constant level of paint / hardener / thinner reaches the paint gun nozzle.

The painting area environment is climatically controlled for temperature and clean air. Parts are treated with either a convection or infrared oven.

We have an experienced paint team that are used to processing many different paint types and painting onto many different substrates. Our delivered quality results are excellent and our customers include some of the top brand names in the automotive and TV industry.

We see painting and part finishing as a growth area into the future and we will continue to stay at the forefront of the available technologies.
