

We tampo print many thousands of parts a day with negligible reject rates. Because we have a long established relationship with suppliers of Tampo ancillaries we are in a position to very quickly and cost efficiently produce new parts. If you bring us your print design we can turn this into a printing cliché and therefore a printed part in a very short space of time.

Most of our Tampo printing takes place in a temperature controlled, clean air environment.. Our staff are well trained in printing techniques and the proper care and set up of ink and the printing equipment.

Tampo printing is an excellent way to mark your injection mouldings, be it with your logo or product information. At Maurice Ward s.r.o. we give customers the opportunity to do this in one place and without the need to deal with a moulding supplier and a painting supplier.
